STACKE

S I C H E R H E I T M I T S Y S T E M

Partner of the ATM industry

Ever since there are ATMs, STACKE has been one of the leading developers and manufacturers of safes for ATMs.

STACKE received the first approval of a tested ATM safe – a product type which had before been utterly unknown - in June 1980 already. This STACKE debut was accompanied by the market launch of new products which then soon gained in importance.

At present, STACKE has 16 certificates of European certifying bodies – further certificates are being prepared. They include a modular system covering the resistance grades CEN L, I, II, III + IV in accordance with EN 1143-1.

The system has been standardised in such a way that it enables to configure different dimensions, an individual geometric design and a variety of types of systems-dependent openings.

As a result, STACKE is a competent, experienced and creative partner for the development and production of ATM safes. And STACKE is offering its performance range to the international market at fair conditions.
